HEATING AND VENTILATION SYSTEM

CONDENSATION MOISTURE MOULD & MILDEW TOXINS COOKING ODOUR PET ODOUR ALLERGENS

1 Our Positive Pressure Ventilation System

Create a drier home environment for you and your family

Our system draws filtered dry air from the roof cavity to help Maintain airflow and healthier air Quality through ceiling Vents to all areas of the home.

The dry warm air from the roof cavity is taken through a high Quality F8 Hospital grade Filter Before it enters the home.

F8 Hospital grade Filter

- Our system helps control Condensation, Reduce Moisture buildup, Eliminate Mould, Mildew, Smelly Odours and Allergies
- Saves money on heating as a drier home Is easier to heat
- We use high quality AC fans which cost Very little to run
- We use the latest intelligent control technology which allows you the benefits Of multiple settings depending on the Season
- WIFI controllable

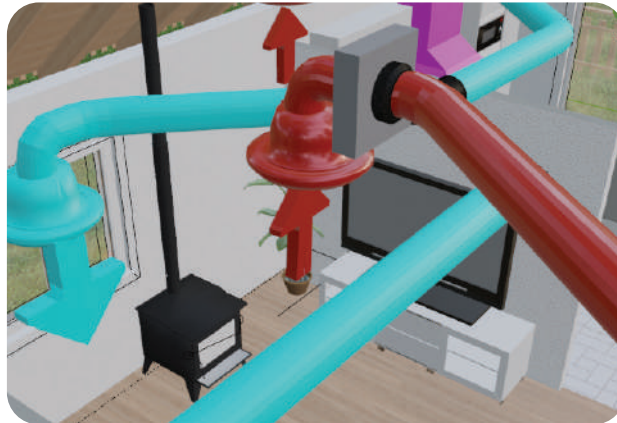

The result is a Drier, warmer and Healthier home

2

Heat Transfer System

Heat Transfer Kit

The Heat Transfer Kit allows the Ventilation System to take the heat from your Heat Pump or Fireplace and distribute it throughout your home

3

Summer Cooling System

COOL, FILTERED, FRESH AIR FROM THE OUTSIDE IS CIRCULATED INTO EVERY ROOM

The Summer Cooling System brings in cool, Filtered air from the south side of your home

The unit is conveniently located on the shady side of your home just under the roof eave. In hot summer months the Summer Cooling System regularly circulates the air in your home with fresh, cool, filtered air from the outside to keep your home comfortably cool

Fresh, Cool, Filtered Air

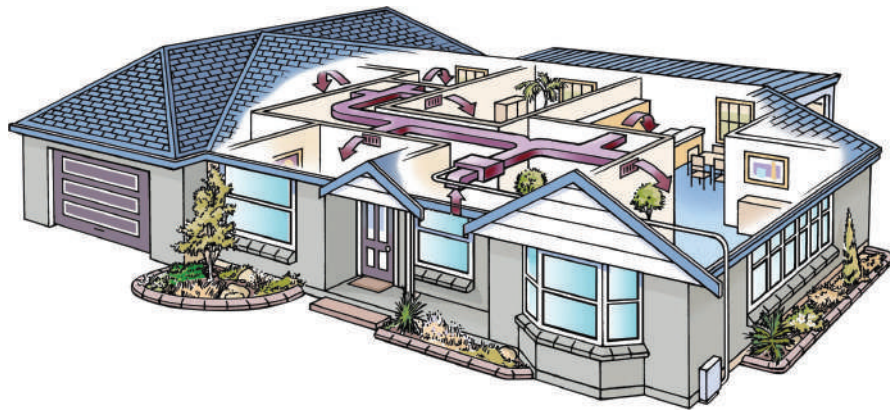

Wifi controlled

Retrofitted to any existing ventilation system

HIGHWALL, FLOOR & CENTRALLY DUCTED HEATING SYSTEMS

Heat your entire home with our Heat Pumps and Centrally Ducted Heating System.

This energy efficient way to heat your home has very low running costs. It improves the air quality in your home with filtration and deodorising systems. It is safe with no hot surfaces and provides heating in the winter and cooling in those hot summer months.

CENTRALLY DUCTED HEATING SYSTEM

Installed in your roof cavity or under the floor. The Centrally Ducted Heat Pump System delivers Warm or Cool filtered air into all of the chosen rooms in your home.

ZONE CONTROL

Add ons include smart zone control options that allows you to choose how much heating and cooling you would like to distribute throughout your home

HEAT PUMPS

Choose from either high wall or floor mounted heat pumps. Designed for New Zealand conditions and fully programmable to come on whenever you need it

WIFI SMART CONTROL

The great news is all our Heat Pump solutions Can be controlled from your Mobile Phone or Tablet from anywhere in the world.
